Dear Pumps Australia,

RE: SHP50 WET END PUMP KIT PURCHASED

I would like to thank Ben and the staff at Pumps Australia for making our purchase easy and simple.

We currently have the wet end kit coupled to a 16hp Petrol motor as our main fire fighting pump. It has exceeded our expectations for performance. With the standard 8hp pumps we were running, we would only get around 50 psi on full throttle. With this cast iron kit we are now reaching 150-155psi and it is so much better for the larger fires. We have even had the opportunity to really put the pump through a extreme test when we attended a hay shed fire. The high presser on the fog branch was just perfect. We were able to attack the fire hard and fast which stopped it spreading.

With all this being said, we at **Western Edge *Fire* Service** can 100% recommend this kit to any one thinking of purchasing a life time pump kit. If it wasn't for this kit we would not be able to do what we do.

Kind regards,

Brett Hovey
